

## Science & Politics

“We follow the Science” said one hundred times.  
COVID-19 needs attention;  
Stay home they say, listen to clock chimes,  
T’will help more than a fraction.

Decimals to teach and fractions too,  
Geography, History, French;  
Old knowledge adults wish to renew,  
Remembering is such a wrench!

Two thousand scientists in nineteen eighty five,  
Told us the earth is warming;  
Quick action is needed to keep people alive,  
It was very clear – that warning.

Thirty five years later, carbon rising more,  
Scientists wringing their hands;  
Politicos listen to medical professor,  
Climate action – no serious plans.
